OUR FACTORY

Our factory boasts an impressive industrial production facility, spanning a vast expanse of 600,000 square meters on an annual basis. This substantial area is thoughtfully divided into 8,500 square meters of enclosed workspace and a sprawling 18,500 square meters of open area, all harmoniously integrated within a total site measuring 27,000 square meters. This extensive infrastructure allows us to leverage a significant competitive advantage in the production of high-quality travertine materials, specifically designed for both natural flooring and facade coverings.

Our specialty lies in creating premium travertine products tailored to the unique requirements of various architectural and design projects. We cater to an array of settings, including museums, historic living spaces, tourist facilities, and residential buildings, all nestled within their natural environments. Our travertine materials enhance the aesthetics and functionality of these spaces, contributing to their timeless beauty and longevity.

At our core, we are committed to preserving the essence of nature, and this philosophy is embedded in every aspect of our production. Our slogan, "Natural aging from nature to life," reflects our dedication to blending the wisdom of nature with cutting-edge manufacturing techniques. We believe in not only creating products that stand the test of time but also in doing so in a way that respects the environment. Sustainability and eco-conscious practices are deeply ingrained in our production processes, ensuring that our travertine materials are not only stunning but also environmentally responsible.

In summary, our factory's extensive and thoughtfully designed facilities, coupled with our commitment to the principles of natural aging and sustainability, enable us to produce superior travertine materials that bring beauty and durability to a wide range of architectural projects.

OUR MINE QUARRY

Our quarry is strategically located with in the rich travertine deposits of Denizli, specifically in the Ballık Boğaz region.

As Hisarlı Marble, we have an annual production capacity of 30,000 cubic meters, equivalent to first-grade travertine blocks, totaling approximately 75,000 tons. Our production process involves the careful extraction of selectively chosen travertine blocks that preserve their natural beauty.

By combining modern technology with the expertise of our skilled team, we are committed to delivering aesthetically appealing, durable, and high-quality products to our customers.

With such extensive facilities and abundant resources, we are proud to be a leading force in the travertine industry, committed to delivering the highest standards of quality and customer satisfaction. Our commitment to sustainable and responsible quarrying practices ensures the preservation of this invaluable natural resource for generations to come.

Tumbled TRAVERTINE

Tumbled Travertine undergoes a unique production process where it is intentionally tumbled and aged with pebbles on its upper surface, resulting in a distinctive and rustic building material. This meticulous treatment imbues the stone with an aged appearance, creating a timeless and artistic quality that can transform any space into a reminiscent haven of history.

As a versatile natural stone, Tumbled Travertine finds its applications both as flooring and as a captivating wall covering. Its adaptability makes it a popular choice for various design projects, allowing for the creation of cohesive and aesthetically pleasing environments.

One of the standout features of Tumbled Travertine is its suitability for outdoor and wet areas. The worn surface contributes to its remarkably low slip resistance, making it a practical and safe option for spaces that may be exposed to moisture. This attribute adds to its appeal, especially in areas where safety is a priority.

Furthermore, Tumbled Travertine Natural Stones come in a range of standard and special sizes, providing flexibility in design and installation. Whether you're envisioning a traditional layout or a custom arrangement, the availability of different sizes ensures that the stone can be tailored to meet your specific needs.

In essence, Tumbled Travertine is not merely a building material; it's a testament to the marriage of functionality and aesthetic charm, offering a unique blend of history, safety, and design versatility for a wide array of architectural and decorative endeavors.
